

Helping award-winning Claridge's Hotel deliver the highest levels of service and environmental care

"Set in the heart of London's Mayfair. Claridge's is the epitome of timeless elegance, and considered to be one of the best 5-star luxury hotels in the world."

Founded in 1812 as 'Mivart's Hotel', the hotel was bought in 1854 by the Claridge family and ever since the 197-room hotel has had longstanding royal connections. Members of royal families and Heads of State have occupied rooms and suites together with famous writers, actors and rock stars.

The challenges they faced

Limited storage space: Like most historic hotels in London, there is not enough storage space for a single daily collection of waste, which results in multiple daily collections.

Increasing demand: With the number of extensions to the hotel came increasing demand, extra waste and different types of waste. All of which have to be managed to the highest standard possible.

Seasonality: Certain periods in the year see large increases in the number of guests from different parts of the world. In addition, the hotel hosts several high profile events. These factors cause a great fluctuation in the quantities of waste that need handling, storing and collecting.

Food waste disposal: The hotel tried to treat food waste in an on-site digestion system, however, reliability and space constraints made this a complicated solution. The hotel now uses compost generated from Westminster's food waste collection service to grow produce such as fresh herbs for its many restaurants.
